SUBJECT AND AUTHOR INDEX VOLUME 37—1989 NUMBERS 1-12

This index consists of only those articles found in volume 37 (1989). The first half of the index is organized as a subject classification index, which is updated each year as the technology grows. The original structure allows the index classification scheme to be updated so that new categories and subcategories are easily incorporated. Entries in this section are chronological by subject category. All of the subject classification index headings and subheadings are included to indicate where no entry exists.

The second section, the **Author Index**, is an alphabetical listing of every author published in the *Journal*. This year the **Author Index** has been expanded to include full first names (when originally published).

Key: Communications (**C**); Corrections (**CORR**); Editorials (**E**); Engineering Reports (**ER**); Features (**F**); Letters (**L**); Messages (**M**); Standards (**S**); and Technical Committee Reports (**TCR**).

EDITOR'S NOTE

In addition to this index, the first 28 volumes of the *Journal* are available as the *Cumulative Index*. Volumes 29-35 are available as *Cumulative Index 2*. In addition, an annual index is published each volume year in issue number 12 (December). The *Journal* is currently devising a plan to incorporate all of the past indices into one publication. This will take several years because of the degree of cataloging involved. However, once this is completed, an electronic version will be possible.
